Designed and created as both a valuable tool for beginners and a strong support for professional artists, the Leonardo Collection stands out for its clear explanations, plain language, and especially for its intelligent, well-directed choice of illustrations.

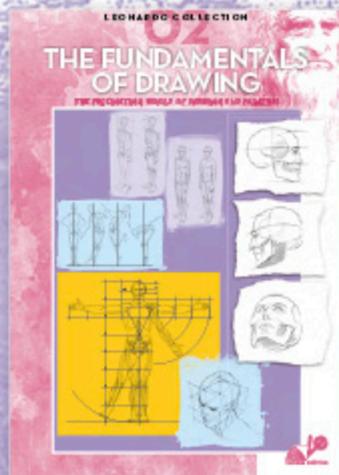

The Collection offers exhaustive information on methods and strategies in both drawing and painting, starting from the basics of drawing and gradually presenting various media and techniques in a vast range of subjects. The first five titles of the series have been adopted by many art schools throughout the world because of the informative and easy to follow step-by-step practice and demonstration approach.

Each manual in the Leonardo Collection explores a single subject matter, but taken together they create a comprehensive survey of drawing and painting useful for artists of all levels and abilities who want to expand their knowledge and skills.

HUMAN ANATOMY

Anatomy plates for artists

PUBLISHED BY VINCIANA

Isbn 978-88-86256-86-8

After 40 years in the field of drawing and painting through publication of the Leonardo Collection, Vinciana Publishing has decided to utilise its vast experience by issuing these two volumes devoted to the anatomy of the horse and the human body. These volumes have a unique special appearance, inspired by anatomy texts from the late nineteenth century. Each volume consists of 48 loose plates plus an instructional text. The structure of the volume permits readers to use the individual plates without the restrictions imposed by bindings; for example, one can put two plates side by side - whether these illustrate the head, the thorax, or another part - and compare bone structure to muscle structure. Each plate is numbered and indicates both the part illustrated and its scientific nomenclature. Consequently the use of the plates is independent from the text, and reading is a choice left to those who would like to improve their knowledge of anatomy.
